Market Synopsis of Global Women Healthcare market:

Market Scenario:

Women health is referred to the health problems that are specific to women anatomy. It relates to the unique issues which includes pregnancy, menopause, and conditions of the female organs. Women health also includes medical situations in which women face problems not directly related to their biology but due to gender-differentiated access to medical treatment. Women's health issues have attained higher international perceptibility in the recent decades. The targeted policies and government initiatives to decrease the burden of the women health diseases have enabled women to lead healthier lives, while some significant gender-based health disparities remain in many countries. With limited awareness and less income levels in many developing countries are making health improvements for women exceptionally difficult.

The market for women healthcare is projected to grow at a steady CAGR of 5.04% during the forecast period from 2017-2023.
