Chelated Trace Minerals Market in Feed Research Report—Forecast till 2023

Global Chelated Trace Minerals Market in Feed Research Report: Information by Type (Zinc, Iron, Cobalt, Copper, Others), Form (Dry, Liquid), Chelate Type (Amino Acids, Proteinates, Polysaccharide Complexes, Others), Livestock (Ruminant, Swine, Poultry, Aquaculture, Others) Region (North America, Europe, Asia-Pacific, RoW)—Forecast till 2023

Market Scenario:
Chelated trace minerals in feed are also known as organic trace minerals used in feed. These are required in small quantities but play an important role in the growth and performance enhancement of the animals. The chelation of the trace minerals increases the availability of these nutrients to animals and helps in easy absorption increasing the performance of the livestock. The increasing awareness among the consumers regarding the benefits of chelated trace minerals have boosted the demand for these trace minerals.

Segmentation:
The global chelated trace minerals market in feed has been segmented based on type, form, chelate type, livestock, and region.
By type, the global chelated trace minerals market in feed has been classified as Zinc, Iron, Cobalt, Copper, and others.
On the basis of form, the global chelated trace minerals market in feed has been divided into dry and liquid.
The global chelated trace minerals market in feed is also segmented on the basis of the chelate type used as amino acids, proteinates, polysaccharide complexes, and others.
The global chelated trace minerals market in feed has also been segregated, on the basis of livestock, into ruminant, swine, poultry, aquaculture, and others.
The global chelated trace minerals market in feed has been studied with regard to four key regions—North America, Europe, Asia-Pacific, and the rest of the world.
The North American chelated trace minerals market in feed has further been segmented into the US, Canada, and Mexico. The European chelated trace minerals market in feed has been classified as the UK, Germany, France, Italy, Spain, and the rest of Europe. The chelated trace minerals market in feed in Asia-Pacific has been divided into China, India, Japan, Australia and New Zealand, and the rest of Asia-Pacific. The chelated trace minerals market in feed in the rest of the world has been segmented into South America, the Middle East, and Africa.

Key Players:
Archer Daniels Midland Company (US), Cargill, Incorporated (US), BASF SE (Germany), Kemin Industries (US), Koninklijke DSM N.V. (The Netherlands), Nutreco N.V. (The Netherlands), DLG Group (Denmark), InVivo NSA (France), Bluestar Adisseo (China), Alltech (US), are some of the key players in the global chelated trace minerals market in feed.

Regional Market Summary
Europe is expected to dominate the market for chelated trace minerals market in feed during the forecast period owing to the increasing demand for more nutritious animal feed products. High awareness and food safety regulation, and high demand for high quality animal-based products has driven in Europe. North American market for chelated trace minerals is growing at a significant rate. The US is the major contributors to the growth of the North American chelated trace minerals market in feed. China being one of the largest feed producers is contributing a major share in the Asia-Pacific market. The need for production of high-quality meat is driving the demand across the globe.
